Any CR Developers out there ever come across this?

After applying SP1 to CR Designer (2008) for a CR 2008 Server evaluation, I was no longer able to print. I tracked the problem down to the Crystal Reports Print Control dialog box (csprntdlg.dll).

This was the error from InfoView: 

And this in CR Designer 12: 

In order to complete my evaluation, I replaced the DLL with a copy from before the install of the InfoView ActiveX print control, and the SP1 patch:

Everything's working fine now, but I'm curious to see if anyone experienced a similar problem. SAP hasn't replied to my eval support request, and I haven't found anything on the Web for this particular issue.
