At Amcom we're huge fans of maximum resolution and minimum font sizes, and apparently I wasn't fully maxing out on this capability.

I noticed that one of our guys (Charlie) was coding with the Consolas 8pt font, but when I used it, it was blurry.

Turns out the trick is to enable ClearType - which isn't on by default. If you're a fan of the ultra-small fonts, make sure to [enable ClearType](#) and try the Consolas font at 8pt.
