

Windows 7 64bit and a crashing Citrix XenApp Client

We're starting to use Windows 7 64bit for Developer Desktops (well, three of us so far that are willing to be early adopters).

One of the things we had a problem with was logging into a Citrix remote-desktop; it would give the user a "CDViewer has stopped working". Here are the diagnostics:

Problem signature:

```
Problem Event Name:                CLR20r3
Problem Signature 01:              cdviewer.exe
Problem Signature 02:              11.2.0.31560
Problem Signature 03:              4aac18be
Problem Signature 04:              DesktopViewer
Problem Signature 05:              11.2.0.31560
Problem Signature 06:              4aac18ba
Problem Signature 07:              105
Problem Signature 08:              80
Problem Signature 09:              System.IO.InvalidDataException
OS Version:                        6.1.7600.2.0.0.256.48
Locale ID:                          1033
```

It has something to do with the version of Citrix that we're using on the server vs. the latest client version. The workaround is rather simple, in Windows 7 you need to associate the ".ica" extension with C:\Program Files (x86)\Citrix\ICA Client\wfica32.exe program.
